Pretty much we want to make the new piezometers into wells and remove any free product we find. Explore drilling new piezometers farther out to find the extent of this issue. We can't excavate any more due to structures, but we want to get below the Indiana guidance for industrial settings. I think the recommendations in the report are what we intend to do.

Hi Teri,

I looked over the report. Have you gotten any direction from your corporate office on next steps here?

Thanks,
Peter

Peter,

I received the report yesterday. I am trying to get an electronic copy to get to you today.

Hi Teri,

Just checking in on the below. I also received the 2017 Financial Assurance (FA) submittal for the site. The report for the loco shop that contains info on planned additional work in that area will help me evaluate the FA submittal and provide a response.

Thanks,
Peter

Peter,

We drilled 3 additional piezometers and sampled, but I still don't have the formal report. I have been very busy and completely forgot about the report. I apologize. Let me rattle their brains a little and get this done. We found contamination in the new piezometers, but no free product to speak of. I have been waiting for corporate to weigh in on our options. Once again, I will check with them.

Hi Teri,

Wanted to check in with you on the below to see if you had any updates/reports for this area. In your message below, it sounded like you were preparing an additional submittal based on the results of the September 2016 SAP.

Thanks,
Peter
